***Allowable Subject Matter***

Claims 2 and 5-9 are allowed.

5 Applicant has pointed out that a modification of Ugon to use other well-known methods cited by Examiner to meet the limitations of claim 2 lacks a proper motivation. Examiner is persuaded by Applicant's arguments that the person of ordinary skill in the art would not be motivated to substitute a voltage regulator or capacitor in the manner suggested by Examiner.

10 With respect to claims 5-7, in responding to Applicant's arguments, Examiner realized that the performing of the microprocessor operation *simultaneously* with the EEPROM write or erase was not taught or suggested in the prior art.

15 Claims 8 and 9, when read in light of the specification, make it clear that the hiding step is performed by using a random write to the EEPROM (which requires a charge pump) and masking the encryption operation within the EEPROM write waiting period. This simply is not taught or suggested in the prior art. A normal EEPROM write is disclosed by Applicant on page 6 of the specification.
